June 23, 2026

OVERVIEW

A focused 30-day sprint to design, build, and deploy one production-ready Power App or Power Automate flow with documentation and training.

WHAT'S INCLUDED

Documentation & Reporting

- Technical documentation
- Documentation

Configuration & Implementation

- Testing & deployment
- App/flow build
- Deployment

Training & Enablement

- 90-minute knowledge transfer session
- Training session

Additional Deliverables

- One production-ready Power App or flow

ENGAGEMENT PHASES

Discovery & Requirements Gathering

Understand business process, requirements, and success criteria

- Conduct requirements workshop with stakeholders
- Document current process and pain points
- Identify data sources, integrations, and security needs
- Define success criteria and acceptance requirements
- Requirements summary document
- Process mapping diagrams
- Requirements package for customer approval

Solution Architecture & Design

Design the target Power Platform solution

- Design data model and entity relationships
- Define app or flow architecture
- Validate licensing and environment strategy
- Design security roles and permissions
- Solution architecture diagram
- Data model documentation
- Architecture review summary

Environment Configuration

Prepare Power Platform environments and governance settings

- Configure development and production environments
- Set up DLP policies
- Configure solution layers and ALM structure
- Validate connectors and permissions
- Environment configuration baseline
- DLP policy summary
- Environment readiness confirmation

Build & Iteration

Develop the Power App or Power Automate flow

- Build initial app screens or flow steps
- Implement business logic and validations
- Integrate data sources and connectors
- Conduct iterative reviews with stakeholders
- Refine UI/UX and optimize performance
- Working prototype

- Iteration notes and change log
- Demo-ready build for customer review

Testing & Validation

Ensure solution quality, reliability, and performance

- Execute functional testing
- Conduct user acceptance testing (UAT)
- Fix defects and refine logic
- Validate security and permissions
- UAT test cases and results
- Defect resolution log
- UAT approval package

Deployment & Handoff

Deploy solution to production and transition ownership

- Deploy solution to production environment
- Validate production functionality
- Provide admin and user training
- Deliver documentation and governance guidance
- Close project in workflow engine
- Production deployment summary
- Solution documentation package
- Training materials

KEY FEATURES

- Rapid delivery
- Business automation
- Low-risk starter project
- High ROI

INVESTMENT

\$6,000 - \$10,000 USD

Typical engagement: 4 weeks

Price may vary based on complexity, scope, and organizational size.

Expedited delivery available upon request.
